Cancer Network Lung TSSG Clinical Leads workshop

Dr Mick Peake

Clinical Lead, NCIN

www.ncin.org.uk

Lung TSSG Workshop - aims

- To promote the use of data to drive up standards of care and outcomes for patients with lung cancer and mesothelioma
- To update cancer network lung groups on some key national issues
- To introduce the work of the NCIN and promote the engagement of regional and local teams in the process of improving data on lung cancer outcomes
- To help the final development of the National Lung Cancer Dataset
- To get feedback on how best we can promote the development of optimal MDT practice

NCIN

national cancer
intelligence network

Using information to improve quality & choice

What is the NCIN?

www.ncin.org.uk

NCRI
National
Cancer
Research
Institute

NCIN

national cancer
intelligence network

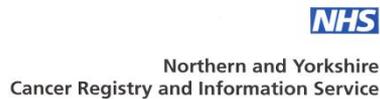

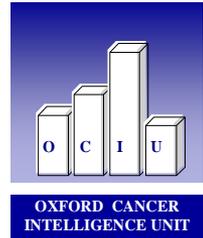

Using information to improve quality & choice

Goal for NCIN: “To develop the best cancer information service of any large country in the world”

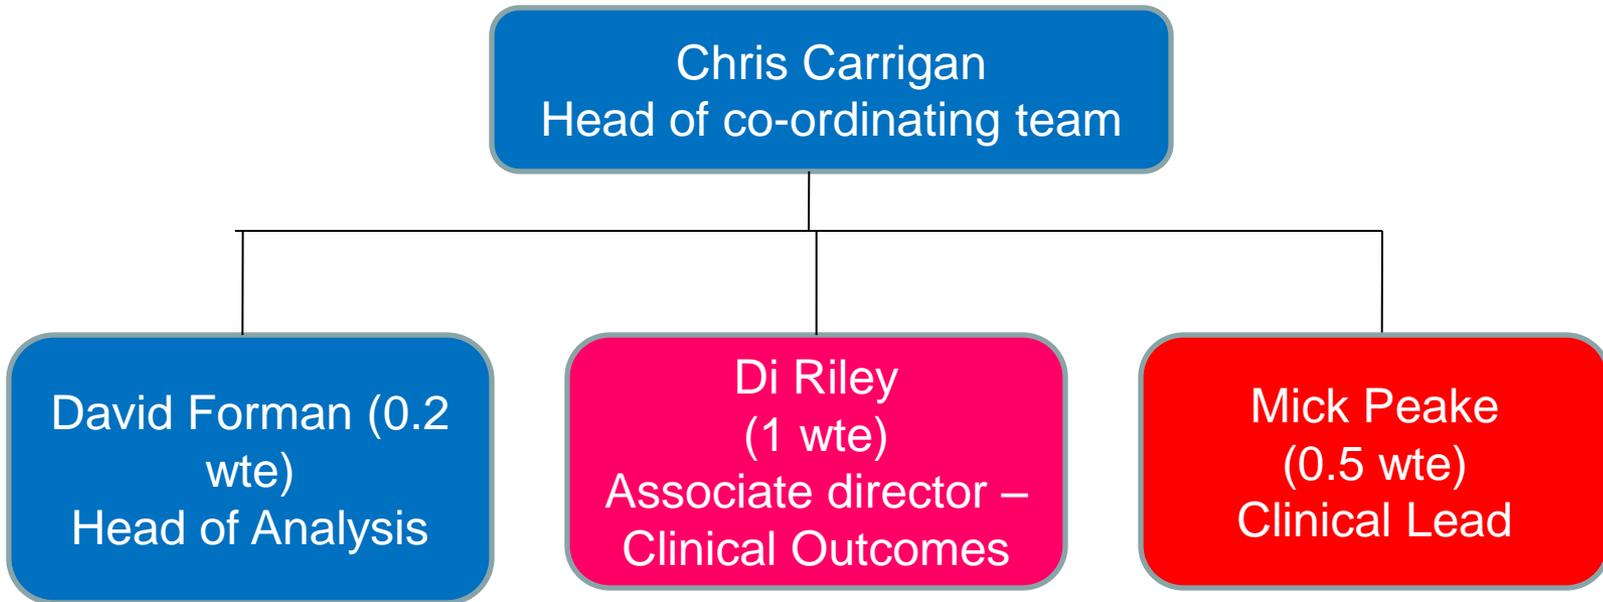

www.ncin.org.uk

NCIN Partners

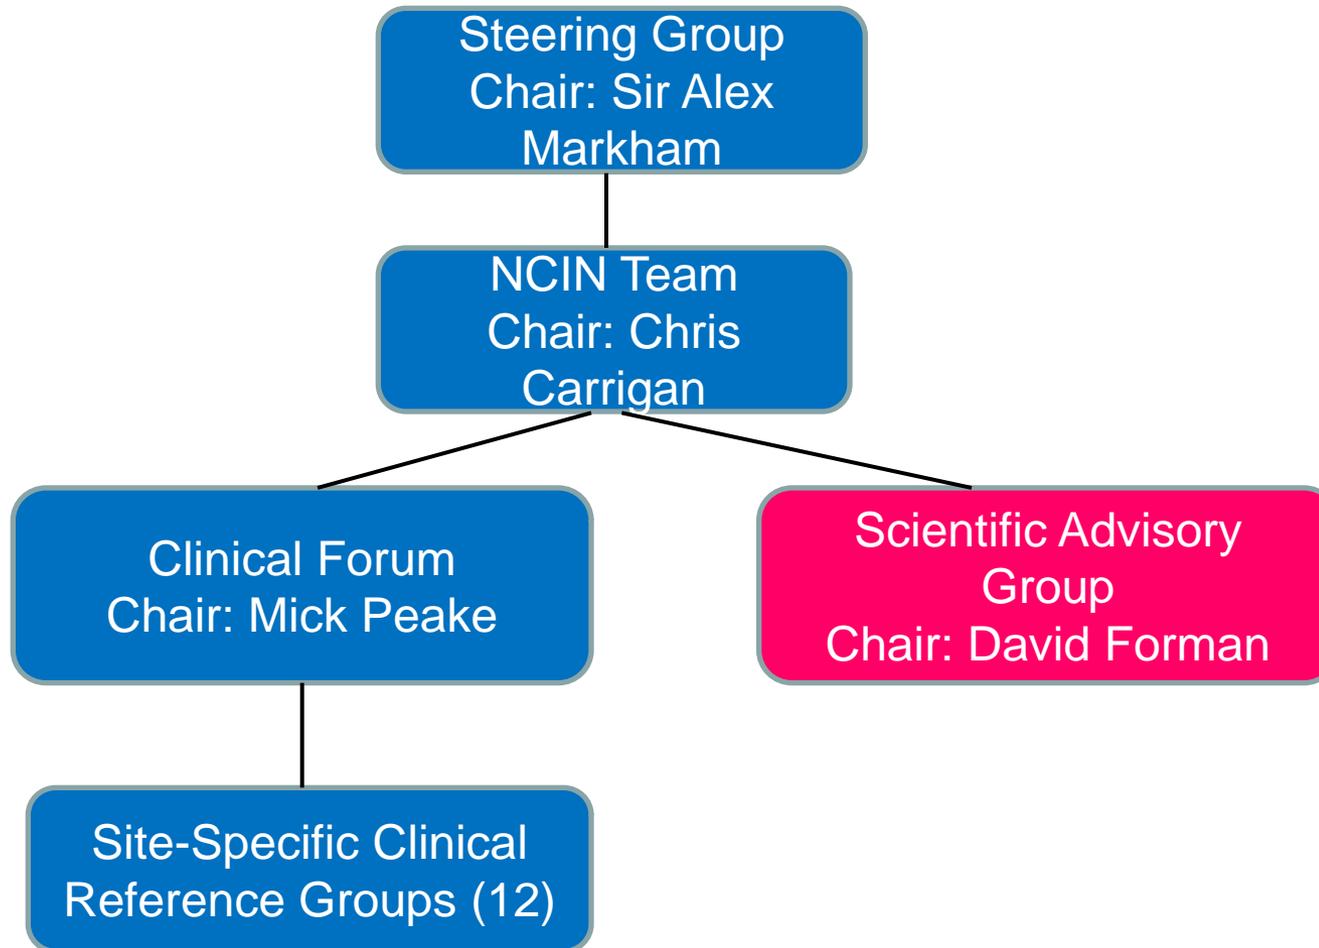

Using information to improve quality & choice

NCIN Core Team

NCIN Current structure

NCIN core objectives

- **Promoting efficient and effective data collection throughout the cancer journey**
- **Providing a common national repository for cancer datasets**
- **Producing expert analyses, based on robust methodologies, to monitor patterns of cancer care**
- **Exploiting information to drive improvements in standards of cancer care and clinical outcomes**
- **Enabling use of cancer information to support audit and research programmes**

Site-Specific Clinical Reference Groups

- Brain/CNS
- Breast
- Children, Teenage & Young Adults
- Colo-rectal
- Gynaecological cancers
- Haematological cancers (including lymphoma)
- Head & Neck (including thyroid)
- Lung (including mesothelioma)
- Bone & soft tissue Sarcoma
- Skin (including non-melanoma)
- Upper GI (including Hepato-biliary)
- Urology (all 4 sub-types)

Main issues for SSCRGs

- Identification of current initiatives
- Support for data set development
- Identification of main clinical indicators
- Forming a link with Peer Review
- Advising on co-morbidity
- Improving staging (engaging pathologists)
- Promoting clinical (and public) engagement
- Advising on reporting
- Making the most of links with the research community
- Supporting the use of data to change clinical practice
- Advising on care pathways (Map of Medicine)

National Cancer Data Repository

Initial work:

Registry-HES linkage: 1995-2004 (England)

- 8.5 million tumour records from Registries
 - c. 30 fields of data
- 34 million hospital in patient episodes
 - c. 150 fields of data

Current work:

- HES data up to 2007 recently added (including an assessment of out-patient HES)
- Linkage with GP Research Database
- Linkage with NCASP audit data (especially stage and performance status)
- Radiotherapy data beginning to flow (to NatCanSat)
- Linkage with Peer Review Data

Using information to improve quality & choice

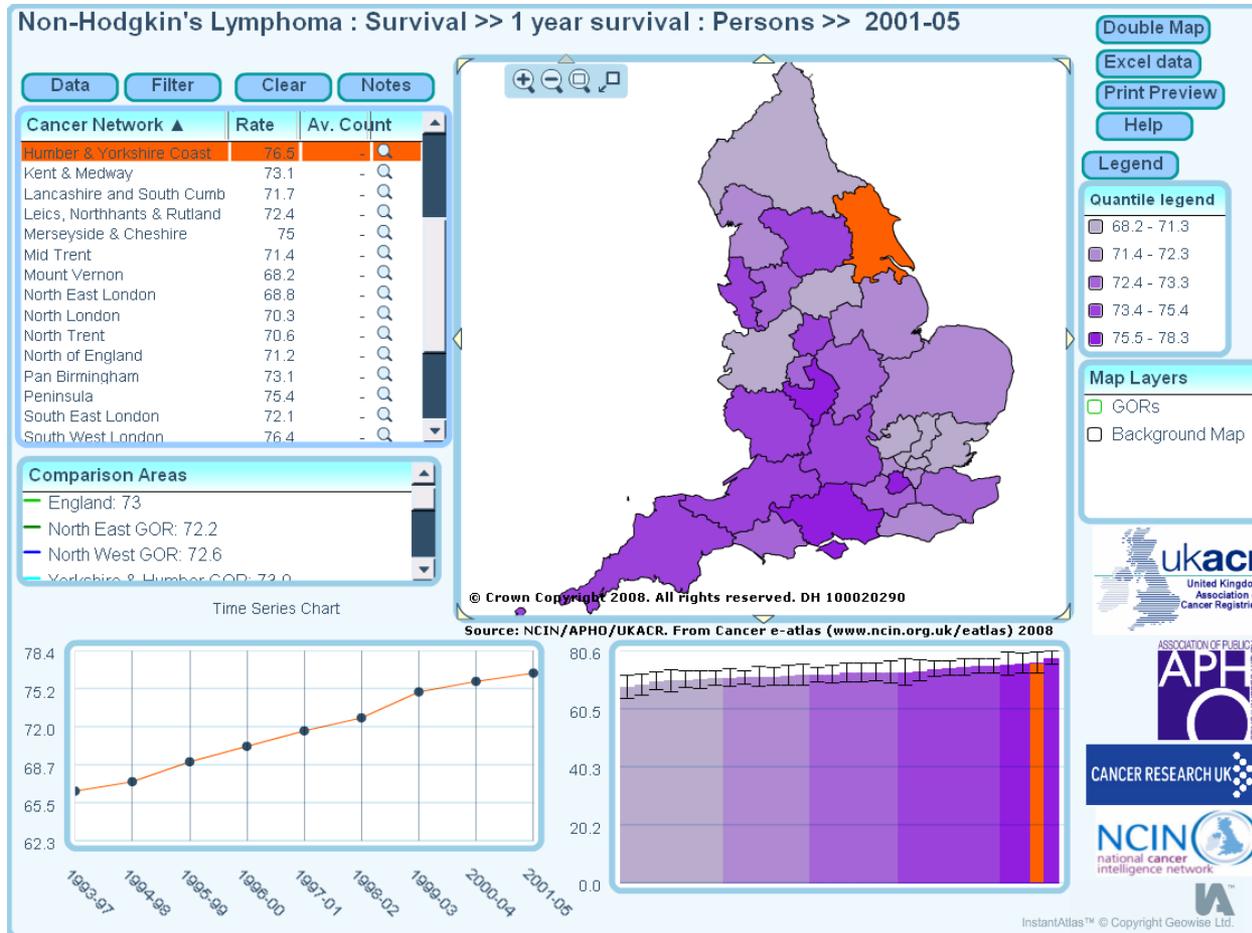

Expert analyses

- Cancer eAtlas: - launched July 2008
www.ncin.org.uk/eatlas
 - Large and varied interest
 - International recognition
- Reports on:
 - UK incidence & mortality
 - One year survival
 - Deprivation
 - Prevalence
 - Ethnicity
 - Male cancers
 - Cancer in the Elderly
 - *Surgery (due out Q1 2010)*
- Microsites

Using information to improve quality & choice

Using information to improve quality & choice

Trends in 1 year survival: England 1985-2004

C00-C97 excl. C44: All malignant neoplasms (excl. non-melanoma skin cancer)

Males

Years of diagnosis	Number in Cohort	Cumulative Deaths	% Crude Survival	% Relative Survival	95% Confidence Interval
1985-1989	414,345	221,027	46.7	49.3	49.1 - 49.5
1990-1994	445,012	219,778	50.6	53.6	53.4 - 53.7
1995-1999	468,127	208,001	56.0	58.9	58.7 - 59.0
2000-2004	504,166	196,766	61.0	64.1	63.9 - 64.2

Estimated change per 5-yr cohort (%):	5.0	4.3 - 5.7
P value:	0.001	

Notes on Trend

Estimated 5.0% change per 5 year cohort gives an estimated increase of 1% per annum.

Females

Years of diagnosis	Number in Cohort	Cumulative Deaths	% Crude Survival	% Relative Survival	95% Confidence Interval
1985-1989	423,315	172,317	59.3	61.4	61.3 - 61.6
1990-1994	453,522	172,691	61.9	64.2	64.0 - 64.3
1995-1999	475,530	168,215	64.6	67.0	66.8 - 67.1
2000-2004	498,802	164,881	66.9	69.4	69.3 - 69.5

Estimated change per 5-yr cohort (%):	2.7	2.4 - 2.9
P value:	<0.001	

Notes on Trend

Estimated 2.7% change per 5 year cohort gives an estimated increase of 0.53% per annum.

Persons

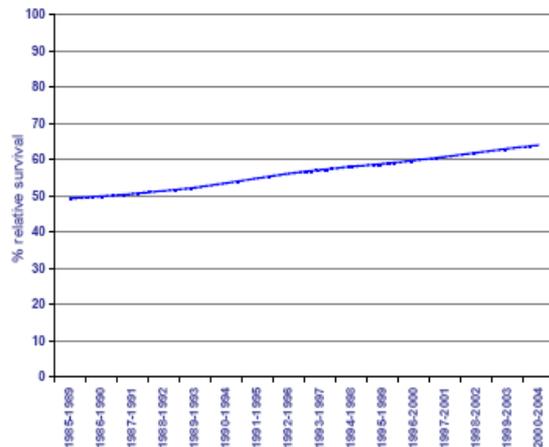

Years of diagnosis	Number in Cohort	Cumulative Deaths	% Crude Survival	% Relative Survival	95% Confidence Interval
1985-1989	837,660	393,344	53.0	55.5	55.4 - 55.6
1990-1994	898,534	392,469	56.3	59.0	58.9 - 59.1
1995-1999	943,657	374,216	60.3	63.0	62.9 - 63.1
2000-2004	1,002,968	361,647	63.9	66.7	66.6 - 66.8

Estimated change per 5-yr cohort (%):	3.8	3.5 - 4.1
P value:	<0.001	

Notes on Trend

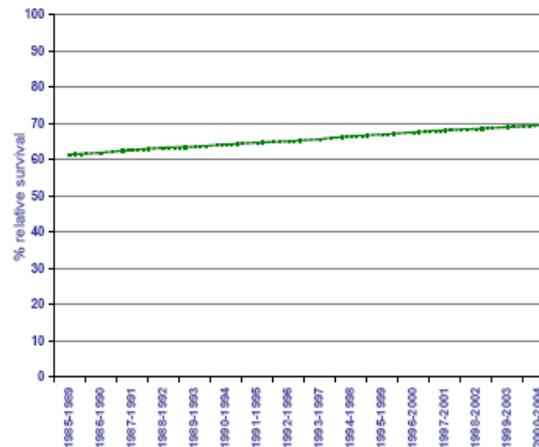

Estimated 3.8% change per 5 year cohort gives an estimated increase of 0.76% per annum.

+ Data

**Clinical
Outcomes Group**

Clinical Outcomes Group:

Main purposes

- To provide a strategic link between the NCIN & the National Cancer Action Team
- To oversee & support the development of Peer Review
- To link between those producing data and those responsible for improving the quality of care
- To identify what data is required to support the strategic development of cancer services
- To support 'intelligent commissioning'
- To promote the use of outcome data in service improvement
- To support the implementation of NICE guidance
- To support the development of care pathways

Using information to improve quality & choice

NCIN

national cancer
intelligence network

Using information to improve quality & choice

www.ncin.org.uk

NCRI
National
Cancer
Research
Institute

Questions for Tables?

- Does the dataset project approach seem right to you?
- What are the barriers to being able to capture information interactively /electronically at the time of your MDT?
- What are the extra key items required specifically for Lung cases?

Questions for Tables?

- What are the key outcome questions you have about your services?
- How well do your MDTs currently use the information available to support changes in practice?
- How can we use cancer intelligence better in the future to more effectively improve patient care?

National Policy Issues

Some relevant current national issues

- Cancer Reform Strategy
 - National Awareness and Early Diagnosis Initiative (NAEDI)
 - In-Patient workstream
 - MDT development programme
- Specialist Commissioning & Quality Agenda
- NCAG Report and Acute Oncology
- NICE Lung Guideline Revision
- Recent and imminent NICE STAs (emphasis on NSCLC sub-types)
- Re-establishment of the DH Lung Cancer and Mesothelioma Advisory Group

National Awareness & Early Diagnosis Initiative (NAEDI): Rationale

- Late diagnosis has been a major factor in the poor survival rates in the UK
- Particularly true of: Breast, Colo-Rectal, Lung, Ovary, Oesophageal and Stomach cancers
- Little or no mention in the 2001 National Cancer Plan
- A major element of the Cancer Reform Strategy

NAEDI Programme

- Co-chaired by Mike Richards and Harpal Kumar
- Administration and co-ordination – CRUK & DH
- NCRI closely involved
- Strong links with screening programme
- Academic links with key researchers
- Cancer Action Team and NHS Cancer Improvement involved
- Primary Care and Secondary Care Clinical Leads
- Launch conference November 2008

Work Streams

- Reviewing the evidence base (BJC supplement Dec '09)
- Cancer awareness measures (public)
- Key messages
- Promoting earlier presentation
- Reducing primary care delay
- International comparisons
- Research
- Diagnostics
- Health Economics

Associated initiatives

- PM's 'Cancer Guarantee' – rapid GP access to diagnostics
- NCRI Early diagnosis, screening and prevention 'Cross Cutting' Group
- NAEDI/NPSA audit of Primary care delays
- NAEDI/NCRI Research strategy (recent call for bids)
- NAEDI International Benchmarking study
- ?Review of NICE Urgent referral guidelines
- DH and NHS Improvement work on diagnostics for 18 week wait
- Health Technology Assessment processes for diagnostics

Reducing Primary Care Delay

- An analysis of Significant Event Audits for diagnosis of lung and Teenage & Young Adult cancer published late 2009
- 18 cancer networks across the country are now taking forward the Cancer in Diagnosis Primary Care Audit

Future priorities:

- We are working with the RCGP to identify specific areas of work to support early diagnosis in primary care
- NPSA Thematic Review of Delayed diagnosis - published autumn 2009

National Cancer Action Team work with Local Services

- 27 Cancer Networks together with their PCTs are establishing new services and strategies to promote early diagnosis
- General practitioners and public health clinicians are providing clinical leadership, which is critical to the success of this initiative
- A wide range of services being taken forward, funded both nationally and locally
- We are beginning to gather the learning from local implementation to inform national policy and delivery

Key Messages

- Lung, prostate, ovarian and bowel cancer key messages published and available on NHS Choices plus stakeholder websites

Future priorities:

- Breast cancer key messages – Published Oct 2009
- Cervical cancer key messages – Published end Oct 2009
- Next tumour sites currently under review by NAEDI steering group – suggestions welcome

Strengthening Research and the Evidence Base

- BJC supplement 'The Size of the Prize' published Dec 2009
- NCRI funding partners current call for research proposals in the fields of early diagnosis. Main themes:
 - public awareness and reasons for late presentation
 - identification of ways to improve identification and referral of patients suspected of a cancer diagnosis
 - methodological research to measure the impact of interventions aimed at promoting increased awareness and earlier diagnosis
 - (novel diagnostic techniques)

International Comparisons

- Modular approach - One core and several optional modules exploring potential root causes of cancer survival rate differences across participating countries
- Work planned and partners identified: Norway, Sweden, Denmark, Canadian provinces & Australian states
- Focus on breast, lung, colorectal and ovarian cancers
- First module - core benchmarking – commenced late 2009

Primary Care Diagnostics

- Taking forward 3 pilots to test open access for primary care: lung, ovarian and colorectal. Starting with lung this year – using risk assessment tools (Willie Hamilton). PM's 'Cancer Guarantee'
- Carrying out a baseline assessment to understand current access to diagnostics information.
 - Survey of GPs about open access to diagnostics piloted amongst Macmillan GPs; revised and final questionnaire to go out shortly
 - Survey of hospital radiology departments
 - Analysis of HES (? and RIS) data to quantify usage

Some relevant current national issues

- Cancer Reform Strategy
 - National Awareness and Early Diagnosis Initiative (NAEDI)
 - **In-Patient workstream**
 - MDT development programme
- Specialist Commissioning & Quality Agenda
- National Cancer Intelligence Network (NCIN)
- NCAG Report and Acute Oncology
- NICE Lung Guideline Revision
- Recent and imminent NICE STAs (emphasis on NSCLC sub-types)
- UICC TNM staging V7 publication

Cancer Bed Utilization: HES England

	Elective	Non-elective	Total
Episodes			
•IP Episodes	376,101	409,218	785,319
•DC Episodes	782,992		782,992
•Reg. Day Attenders etc	182,285	10	182,295

• TOTAL	5,896 (~40%)	8,524 (~60%)	14,420

Cancer Bed Numbers

- Over 14,000 cancer patients are in hospital at any one time
- This equates to around 29 occupied beds per 100,000 population and around 435 for a network with a population of 1.5 million
- 60% of these beds are occupied by patients admitted non-electively

In-patient workstream & acute oncology

- NHS Improvement pilot studies
 - Preventing inappropriate admission
 - Rapid identification of new admissions ('alerts')
 - Rapid transfer to appropriate ward
 - Better discharge planning
- Development of the role of the 'Acute Oncologist':
 - Rapid review of new and emergency in-patients
 - Supervision of febrile neutropenia policies
 - Support in management of patients cancer of unknown primary

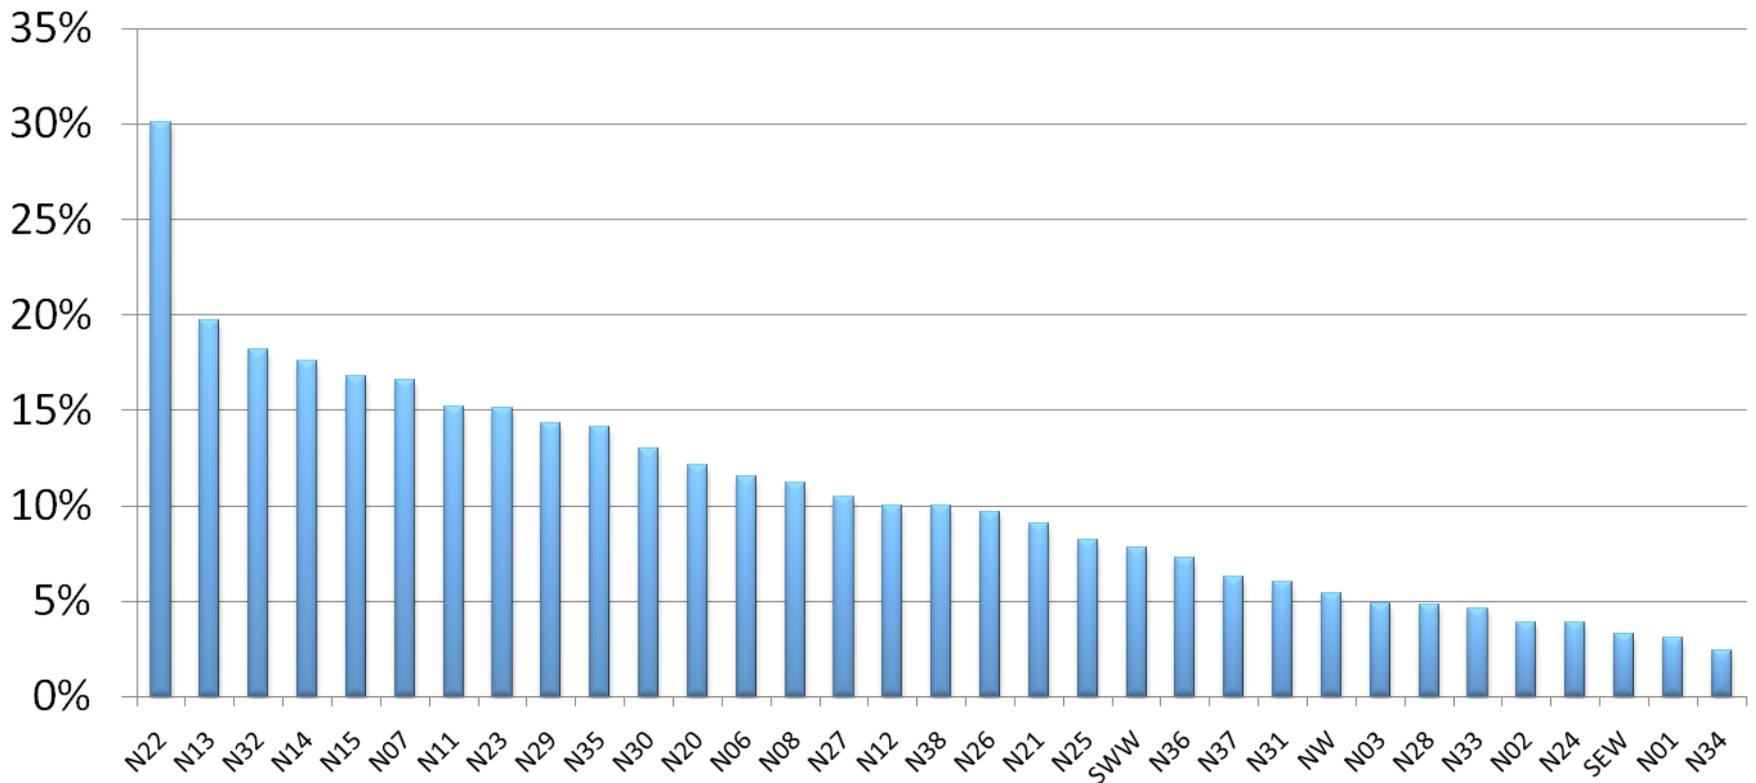

Lung Cancer and Mesothelioma Advisory Group

Main current initiatives:

- Promoting better access to specialist thoracic surgeons
- Pathology:
 - NSCLC sub-typing
 - Measurement of biomarkers – EGFR
- Review of evidence of the impact of specialist nursing

Cell type distribution in Histologically confirmed NSCLC England 2006

Figure 8.3.1.2: Confirmed non-small cell morphology

Cell morphology included in the confirmed non-small cell group

		Count	Per cent
Carcinoma in situ	M8010/2	45	1
Large cell carcinoma NOS*	M8012/3	172	2
Large cell neuroendocrine	M8013/3	40	1
Large cell – undifferentiated	M8020/3	102	1
Non-small cell carcinoma NOS	M8046/3	2,822	36
Squamous cell carcinoma NOS	M8070/3	2,637	33
Adenocarcinoma NOS	M8140/3	1,977	25
Neuroendocrine carcinoma, NOS	M8246/3	3	0
Bronchio-alveolar cell carcinoma	M8250/3	78	1
Mixed tumour (malignant)	M8940/3	35	0
Carcinosarcoma NOS	M8980/3	10	0
Total		7,921	100

*Not otherwise specified

National Lung Cancer Audit: NSCLC pathology analysis: 2007

- Patients first seen 2007 (England only)
- 'NSCLC' cases (excl. SCLC, meso, carcinoid)
 - 18,522 cases
 - 52.4% had a SNOMED histology code
 - 47.6% had no SNOMED code

Proportion with SNOMED code by Network

Proportion with SNOMED and NSCLC NOS by Network

Some issues for discussion

- What can pathologists do to improve the sub-typing of NSCLC?
- Should we always go for a minimum of core biopsy or equivalent?
- Do we need to do further work to establish the relative yields for biomarker (e.g. EGRF) testing in the commoner biopsy techniques?
- When is re-biopsy justified?
- How will these changes impact on the speed of the diagnostic pathway?
- Is there a workforce issue for pathology here and if so, how great is it?
- Should there be more sub-specialisation in thoracic pathology – perhaps some 'hub and spoke' arrangement?
- How do we 'horizon scan' for new biomarkers and support their timely introduction into clinical practice?
