Cancer Alliance Data Pack

By CCG

February 2018

Version 1.1

Produced by the Cancer Alliance Data, Evidence and Analysis Service (CADEAS)

For any enquiries contact: england.CADEAS@nhs.net

Contents

- 1 Summary of key findings
- 2 About the data pack
- 3 How to interpret the data
- 4 Further data releases
- 5 Alliance key indicators grid
- 6 Alliance key indicators grid, with values
- 7 Alliance indicators by CCG

Outcome indicators

- ◆ One-year age-standardised net cancer survival
- ◆ Under-75 age-standardised cancer mortality rate
- ◆ Cancer prevalence
- ◆ Patient experience: rating of overall care

Pathway indicators

- ◆ Breast screening uptake and coverage
- ◆ Bowel screening uptake and coverage
- ◆ Cervical screening coverage
- ◆ Cancers diagnosed through an emergency presentation
- ◆ Routes to diagnosis: breast, colorectal, lung and prostate cancer
- ◆ Cancer waiting times: two-week wait and 62-day standard
- ◆ Age-standardised cancer incidence rate
- ◆ Cancers diagnosed at stage 1+2
- ◆ Cancers staged
- ◆ Median waiting times: prostate, colorectal and lung cancer

8 Annex of data sources

This data pack uses information provided by patients and collected by the NHS as part of their care and support

Version Number	Detail	Date
1.0	Initial release	12/02/2018
1.1	Text in the pack has been updated to reflect change from internal to public use	20/11/2018

1. Summary of key findings

The Greater Manchester Cancer Alliance

The Greater Manchester Cancer Alliance was formerly part of the National Cancer Vanguard. The latest data on some key cancer indicators suggest the standard of cancer care in the Alliance was generally above the England levels. However, there was variation across CCGs within the Alliance.

Please note that for this Alliance there have been changes in the number of CCGs, which affects different data collected at different times.

Screening: No CCG had uptake and coverage for all cancer screening which was above the England average. Wigan Borough CCG had the most screening indicators above average; coverage of breast screening was below average and coverage of bowel screening to age 75 was in line with the England average. Central Manchester, Salford, and South Manchester CCGs all reported lower than England levels for all screening indicators.

Emergency presentations: There was a higher than average proportion of diagnoses as emergency presentations in five CCGs: Central Manchester; North Manchester; South Manchester; Salford; and Tameside and Glossop CCGs. No CCGs in the Alliance had statistically better than average proportions of diagnoses as emergency presentations.

Cancer waiting times: Four CCGs failed to meet the two-week wait standard (in the year to Q2 2017/18): Bury; Heywood, Middleton and Rochdale; Manchester and Oldham CCGs. Six CCGs met the 62-day standard in the same time period; seven failed to meet it.

Early diagnosis: In four CCGs the proportion of diagnoses which were made at an early stage was higher than the England average: Bolton; Bury; Stockport; and Wigan Borough CCGs.

Incidence: Age-standardised incidence rates were statistically the same or higher than England levels for all CCGs.

Survival: Overall, the outcomes of cancer were worse than average. In seven CCGs one-year survival was statistically lower than the England average; it was above average in Stockport and Trafford CCGs.

Mortality: Under-75 cancer mortality was worse than average in five CCGs, and in line with average in the other five CCGs.

Patient experience: Patient reported experience of care was in line with the England level; except in Bolton CCG where it was statistically better, and Heywood, Middleton and Rochdale CCG where it was worse.

2. About the data pack

Cancer Alliances were formed as a result of recommendations in the 2015 Independent Cancer Taskforce's Achieving World-Class Cancer Outcomes report. The 19 Alliances lead on the local delivery of the Cancer Strategy Implementation Plan, using a whole pathway and cross-organisational approach.

CADEAS is a partnership between NHS England and Public Health England. The service supports Alliances with their data, evidence and analysis needs, to help drive evidence-based local decisions in the delivery of the Cancer Strategy Implementation Plan.

This data pack aims to provide all Cancer Alliances in England with a snapshot of cancer in their local populations, with a breakdown by Clinical Commissioning Group (CCG).

3. How to interpret the data

This data pack highlights variation in cancer services across CCGs in the Alliance. By using a colour coding system Alliances can identify where variation exists and prioritise areas for action. Data here should be considered alongside other sources of information for contextual and richer interpretation.

The colour system: broadly, yellow indicates data are similar to the England level. Dark blue shows data are better than England and light blue indicates data are worse than England. Some metrics have been benchmarked to operational standards or expected values; these are denoted in the legends and in the Annex. All statistical tests for England benchmarking have been conducted using a 95% confidence level.

At the time this report was made, there were three sites of the National Cancer Vanguard and 16 Alliances and the metric geography labels reflect this.

Information on data sources can be found in the Annex.

4. Data releases

CADEAS have released the following products, containing data metrics for the Cancer Alliances:

- ◆ A one-off CCG level data pack for each of the 19 Cancer Alliances, to enable comparisons across CCGs within an Alliance.
- ◆ Indicator summary grids comprising key indicators for each Alliance, available at CCG, STP and Alliance levels. These are similar to the grids found in sections 5 and 6 of this data pack and are published by CADEAS on a monthly basis.

5. Cancer Alliance key indicators grid, by CCG

	One-year cancers survival	Under 75 cancer mortality age-standardised rate	Patient experience	Bowel screening coverage (60-69)	Bowel screening uptake (60-69)	Bowel screening coverage (60-74)	Bowel screening uptake (60-74)	Breast screening coverage	Breast screening uptake	Cervical screening coverage	Emergency presentations	Cancer Waiting Times: Two-Week Wait	Cancer Waiting Times: 62-day Standard	Incidence age-standardised rate	Early stage diagnosis	Cancers staged
Bolton																
Bury																
Central Manchester																
Heywood, Middleton & Rochdale																
Manchester																
North Manchester																
Oldham																
Salford																
South Manchester																
Stockport																
Tameside & Glossop																
Trafford																
Wigan Borough																

	Statistically better than England
	Not statistically different from England
	Statistically worse than England

Excludes routes to diagnosis, prevalence and pathway median waiting times. This is due to the volume of data in these three areas. Please see data in rest of data pack

6. Cancer Alliance key indicators grid, by CCG

	One-year cancer survival	Under 75 cancer mortality age-standardised rate	Patient experience	Bowel screening coverage (60-69)	Bowel screening uptake (60-69)	Bowel screening coverage (60-74)	Bowel screening uptake (60-74)	Breast screening coverage	Breast screening uptake	Cervical screening coverage	Emergency presentations	Cancer Waiting Times: Two-Week Wait	Cancer Waiting Times: 62-day Standard	Incidence age-standardised rate	Early stage diagnosis	Cancers staged
