## Contents

- 1 Summary of key findings
- 2 About the data pack
- 3 How to interpret the data
- 4 Further data releases
- 5 Alliance key indicators grid
- 6 Alliance key indicators grid, with values
- 7 Alliance indicators by CCG

### Outcome indicators

- ◆ One-year age-standardised net cancer survival
- ◆ Under-75 age-standardised cancer mortality rate
- ◆ Cancer prevalence
- ◆ Patient experience: rating of overall care

### Pathway indicators

- ◆ Bowel screening uptake and coverage
- ◆ Breast screening uptake and coverage
- ◆ Cervical screening coverage
- ◆ Cancers diagnosed through an emergency presentation
- ◆ Routes to diagnosis: breast, colorectal, lung and prostate cancer
- ◆ Cancer waiting times: two-week wait and 62-day standard
- ◆ Age-standardised cancer incidence rate
- ◆ Cancers diagnosed at stage 1+2
- ◆ Cancers staged
- ◆ Median waiting times: prostate, colorectal and lung cancer

## 1. Summary of key findings

### The South Yorkshire, Bassetlaw, North Derbyshire and Hardwick Cancer Alliance

**Latest data on some key cancer indicators suggest the standard of cancer care in the Alliance was generally similar to the England levels. However, there was variation across CCGs within the Alliance.**

Barnsley, North Derbyshire, and Sheffield CCGs all had multiple indicators across the cancer pathway that were better than, or similar to, the England levels. Conversely Bassetlaw and Doncaster CCGs had a number of indicators that were worse than the England levels.

**Screening:** Screening uptake and coverage were above England levels for the Alliance as a whole. Barnsley, North Derbyshire, Rotherham and Sheffield CCGs all reported data above England levels across the board. However, Doncaster CCG reported lower than England levels for breast screening uptake.

**Emergency presentations:** Three CCGs reported cancer diagnoses through emergency presentation worse than England levels (Bassetlaw, Doncaster, and Sheffield CCGs), but Rotherham CCG reported better (lower) than England levels.

**Cancer waiting times:** Both the two-week and 62-day waiting times standards were met in Barnsley and Sheffield CCGs (in the year to Q2 2017/18). However, over the same period, both standards were unmet in Bassetlaw, Doncaster, Hardwick and North Derbyshire CCGs.

**Early diagnosis:** Barnsley, Hardwick, North Derbyshire and Sheffield CCGs reported data worse than the England levels for proportions of cancers diagnosed at stages 1 and 2 and cancers staged.

**Incidence:** Incidence rates were at the England level across most CCGs in the Alliance, with the exception of higher incidence in Bassetlaw and Doncaster CCGs.

**Survival:** Four CCGs were comparable to the England level on one-year survival and three were below (Doncaster, Hardwick and Rotherham CCGs).

**Mortality:** For under-75 cancer mortality, three CCGs were comparable to the England level and four were worse (Barnsley, Bassetlaw, Doncaster and Hardwick CCGs).

**Patient experience:** Patient reported experience of care was generally in line with England levels across the Alliance. Only Bassetlaw CCG was worse than the England level, and Barnsley CCG was better.

## 2. About the data pack

Cancer Alliances were formed as a result of recommendations in the 2015 Independent Cancer Taskforce's Achieving World-Class Cancer Outcomes report. The 19 Alliances lead on the local delivery of the Cancer Strategy Implementation Plan, using a whole pathway and cross-organisational approach.

CADEAS is a partnership between NHS England and Public Health England. The service supports Alliances with their data, evidence and analysis needs, to help drive evidence-based local decisions in the delivery of the Cancer Strategy Implementation Plan.

**This data pack aims to provide all Cancer Alliances in England with a snapshot of cancer in their local populations, with a breakdown by Clinical Commissioning Group (CCG).**

## 3. How to interpret the data

This data pack highlights variation in cancer services across CCGs in the Alliance. By using a colour coding system Alliances can identify where variation exists and prioritise areas for action. Data here should be considered alongside other sources of information for contextual and richer interpretation.

The colour system: broadly, yellow indicates data are similar to the England level. Dark blue shows data are better than England and light blue indicates data are worse than England. Some metrics have been benchmarked to operational standards or expected values; these are denoted in the legends and in the Annex. All statistical tests for England benchmarking have been conducted using a 95% confidence level.

At the time this report was made, there were three sites of the National Cancer Vanguard and 16 Alliances and the metric geography labels reflect this.

Information on data sources can be found in the Annex.

## 4. Data releases

CADEAS have released the following products, containing data metrics for the Cancer Alliances:

- ◆ A one-off CCG level data pack for each of the 19 Cancer Alliances, to enable comparisons across CCGs within an Alliance.
- ◆ Indicator summary grids comprising key indicators for each Alliance, available at CCG, STP and Alliance levels. These are similar to the grids found in sections 5 and 6 of this data pack and are published by CADEAS on a monthly basis.
