

A new unified Cancer Registration Service for England

Jem Rashbass
National Director for Registry Modernisation

Vision

To provide near-realtime, cost effective,
comprehensive data collection and quality assurance
over the entire cancer care pathway on all patients
treated in England.

as a resource for

patient care, quality, safety and performance
management, audit, research and outcome
monitoring.

Why have things changed?

- Clinical need
- Political push & the Information Revolution
- Patient empowerment
- Cancer is now chronic disease
- Personalised/Stratified Medicine

What needs to happen

- Consistent data processing by registry teams
 - Including staging
 - Extensive data-sets for site specific registries
- Central data clearing-house and processing service
- Real-time QA
- Easily expandable, high granularity data-set (COSD+)
- Improved data access and timely feedback
- Seamless links to cancer screening
- Integral support for
 - Peer review and IOGs
 - National Cancer Audits
 - ONS - National data returns
 - CRUK stratified medicine and beyond
 - National Awareness and Early Diagnosis Initiative (NAEDI)
 - Commissioners, Research, etc

Lessons from the National Brain Tumour Registry

A tale of two workshops

CNS Workshop March 2010 was...

- about input from the expert community
- a reality check
 - Is this what the community wants?
 - can it be made to happen?
 - If it can, then how do we start?
- to identify the champions and early adopters

reasons why this won't work

“the systems aren't there to collect the data”

“data in the NHS is rubbish”

“there is no money”

“I already have my own database, thanks”

“nice idea – but you are mad if you think it can be achieved”

“we all do things differently”

“we are all too busy”

“I have been here before – it didn't work last time and won't this time.”

“we don't have the IT expertise in our Trust”

“it isn't allowed – it breaches patient confidentiality”

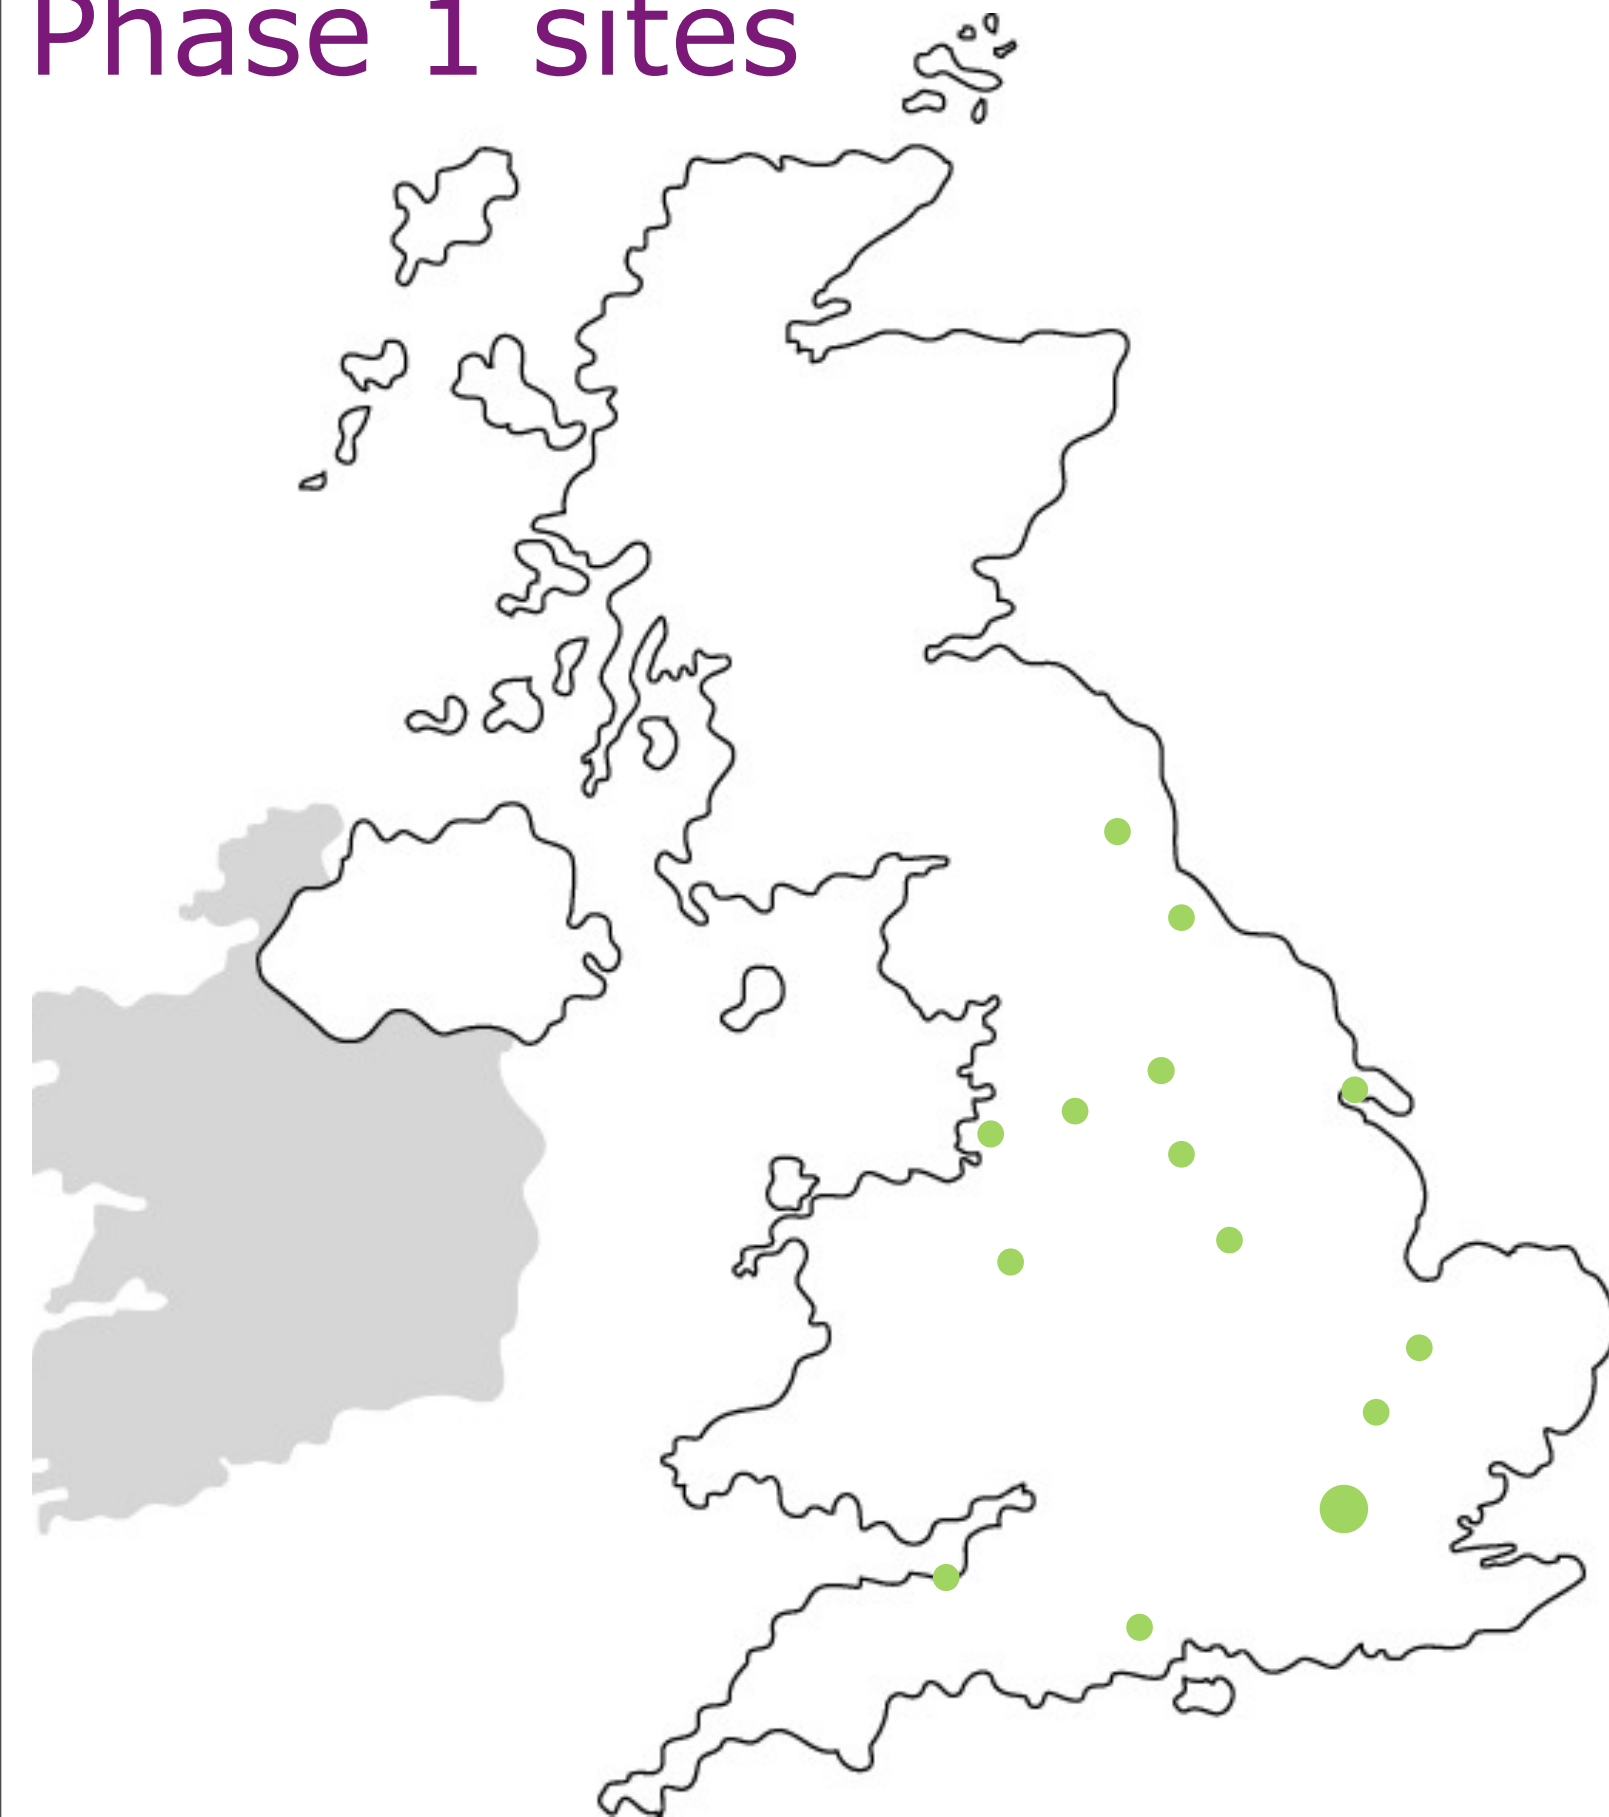

J_(f)di!

- Work from what you can do now, not from what you like to do eventually (80/20 rule)
- Apply the KISS principle:
 - Keep it simple, stupid
- Provide expert input to help get data flowing
- Only address the real show-stoppers
- Share best practice
- Provide timely and relevant feedback and audit of data to improve quality etc

CNS Workshop March 2011

- Phase I volunteers
- 17 Trusts volunteered to be pilot sites
- Caldicott Guardian permission sought
- Trusts and MDT's visited
- Data teams visited
- Data feeds methods established & tested
- Data arrives!!
- Database
- Data feedback
- Second wave Trust permissions obtained

Phase 1 sites

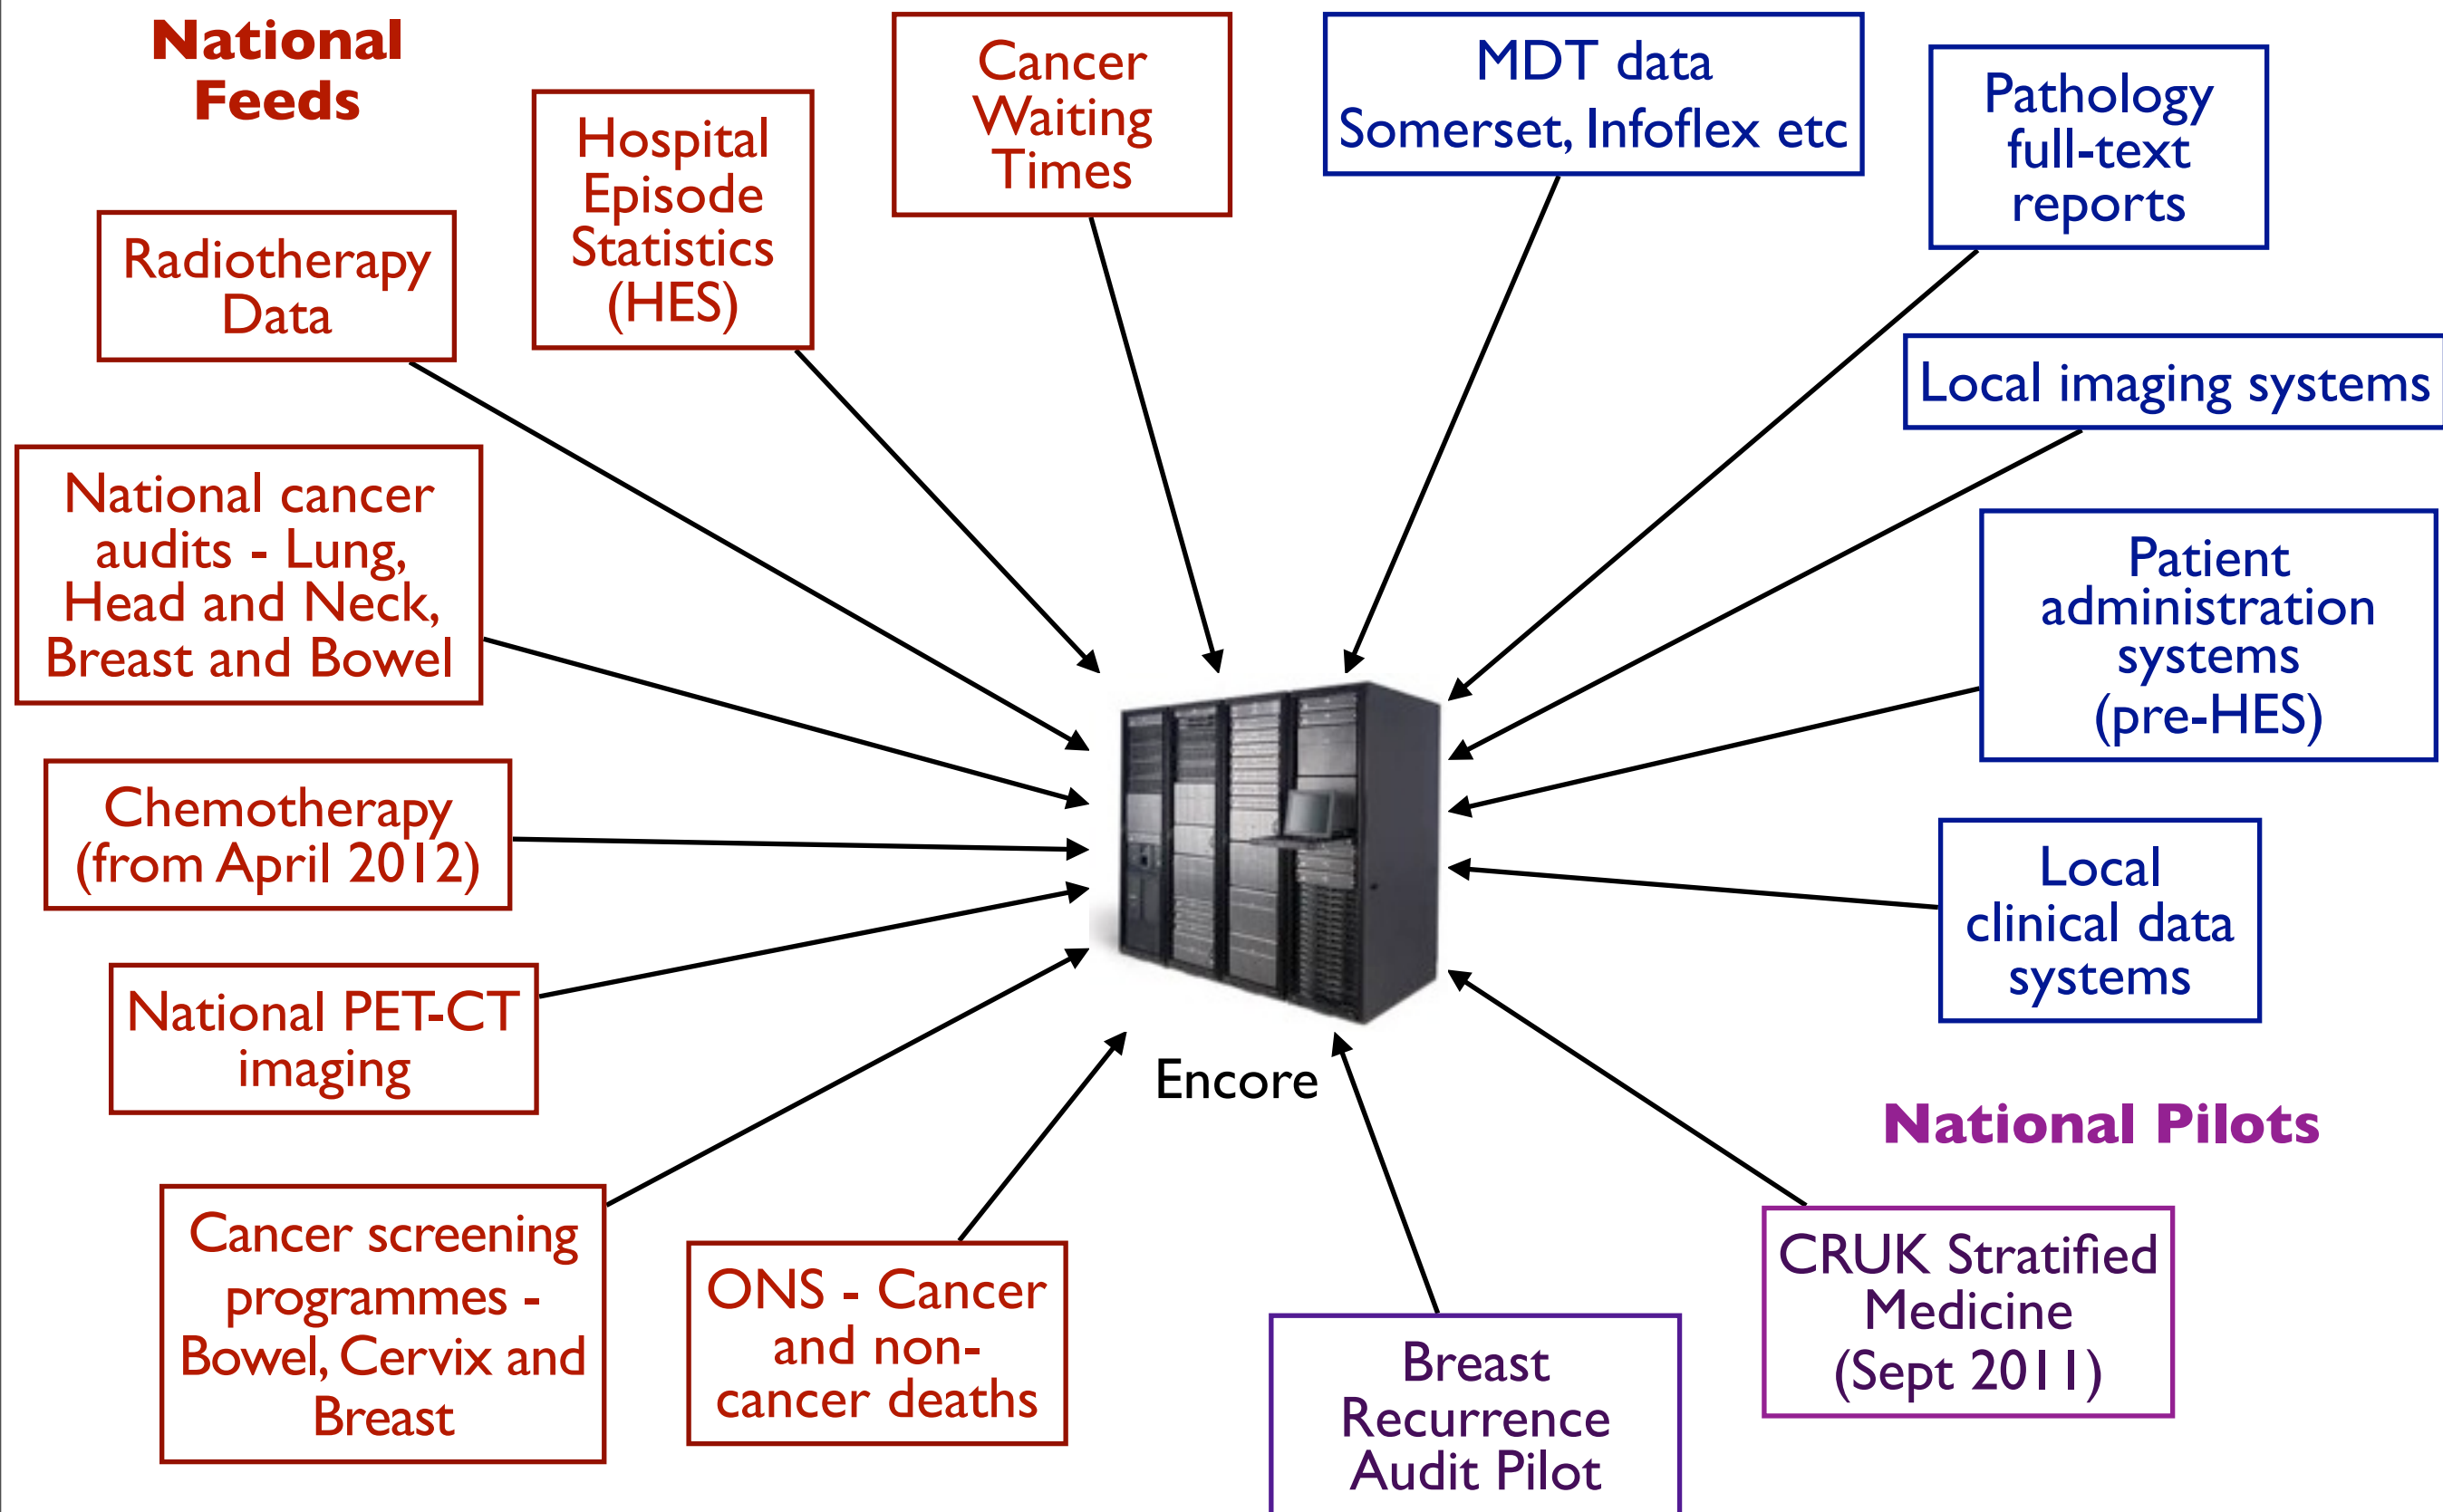

Birmingham
Bristol
Cambridge
Hull
Leeds
Liverpool
Manchester
Middlesbrough
Newcastle – upon-Tyne
Nottingham
Queen's Romford
Sheffield
Southampton

London

Charing Cross
Great Ormond Street
Kings
Queens Square

Organisation	Location	Caldicott Contacted	Caldicott Permission	MDT Meeting	Data Meeting	Data Transfer set up	Data Received

Data sources - patient-level data

What do the data sources look like?

System	Number	Varieties	Live Feeds	Not live
Pathology	167	33	144	23
MDT	165	22	147	18
PAS [♀]	96	>12	96	63
Imaging	IEP/others	3	Pending	~20

[♀]TCR and SWCIS use Hospital Episode Statistics (HES) as source of data

What this is and is not

NOT

- An IT project
- Clinical information system
- Big-bang implementation
- Top-down project

IS

- Change management
- National Cancer registration service
- Obsessed with high accuracy
- Just automation for speed

Data feedback and use...

Feedback the data to clinical teams and patients
Provide tools to analyse the care pathway

Implications for haematology

- Finalise data requirements
- Establish data flows from haematology MDTs
- Develop specific rapid feedback for haematology teams
- Identify supplementary feeds
 - Lab data - for liquid diagnoses
 - FISH?
 - Cytogenetics?
 - Flow?
- Engage commissioners, networks and providers

and so...

The registry migration project will transform cancer care, research and clinical practice in England to provide timely, consistent, accurate data on every patient.

to succeed we need the engagement of clinicians, providers, commissioners, patients and public.
